Released in 1982, AutoCAD was the first CAD program to offer three-dimensional (3D) capability and was an industry leader for several years. According to market research firm Gartner, the third quarter of 2014 marked the first time since 2001 that AutoCAD remained the most popular commercial CAD program among CAD users. The current version of AutoCAD is 2017, released in August 2016. Since 1982, AutoCAD has been used in several industries, including architectural design, construction, marine, engineering, manufacturing, industrial design, transportation, and health care. AutoCAD is used in the construction and aerospace industries and is used for transportation engineering, architectural, and design. AutoCAD is most commonly used by architects and engineering professionals. AutoCAD is the most widely used CAD program among architects and engineers, according to the Architectural Graphic Standards Association (AGSA). History The first AutoCAD version, AD-1, was released in 1982. The first AutoCAD program was designed by Charles Simonson (1931–1998) and John Moritz (1936–2005). Moritz was one of the three original developers of AutoCAD. Moritz also worked as a consultant on the AutoCAD-2 product line, which first appeared in 1984 and was the first widely used 3D CAD software product. AutoCAD was released for the Apple II and Apple III in 1982. It was a breakthrough in computer technology for the time. A few years later, with the introduction of the Macintosh, it gained an even greater user base. Since then, it has been released on the Macintosh, IBM and OS/2 platforms. It was also released for the Atari and IBM PC platforms. The Linux version is available in the RPM and AUR repositories. Basic Design Most CAD software is a package of tools that enable the user to design and modify objects in three dimensions. This software is used to design various objects, such as houses, airplanes, cars, and other buildings. It is one of the mainstays of today's architecture and engineering. Software with these capabilities is called a CAD application. AutoCAD is a parametric CAD (parametric computer-aided design) application. This means that the user can specify the parameters of an object and the CAD software will create it. These parameters can include the length, width, and height of an object, as well as the angle of a floor plan or the size of

PITTSBURGH - A native of New Jersey, William Anning will lead his first Youth Fishing Camp at the award winning Heckscher State Park. During the week-long fishing camp, children ages 7-11 will learn the fundamentals of fishing and the techniques required to catch fish. Boys and girls can choose from tackle, bait, boat and charter boat options and learn how to reel in a catch, clean it, and then clean the whole process. Campers can also select from the best fishing locations and catch a variety of fish including steelhead, trout, salmon and catfish. Campers are responsible for bringing their own fishing gear and lunch. They will have the option of bringing their own boats or renting a pontoon boat. During the week, the campers will also attend a variety of activities including casting fishing techniques, outdoor cooking, nature walks, bird watching, and sports demonstrations. There will be a weigh-in on Friday afternoon to determine the overall winners and the first prize winner will receive \$500 in cash. All campers will receive a certificate for the week and have a chance to win a replica of the famous fish in the "Heckscher State Park", displayed at the entrance to the state park. In addition, many recreational opportunities and activities will be available to campers throughout the week. "Campers will be able to enjoy a variety of activities such as canoeing, fishing and swimming," stated Jonathan Pitman, Manager of Heckscher State Park. According to Pitman, the camp will allow children to become involved in recreational activities that may help them enjoy the outdoors for life. For more information about the camp, call Heckscher State Park at 412-528-9800 or visit www.heckscherpark.org. HONG KONG (Reuters) - The Hong Kong government said on Tuesday it had no evidence that it was willing to bargain with pro-democracy protesters over the city's political future, even as Beijing continued to ramp up pressure on the territory's leaders. A group of activists wearing surgical masks take part in a protest at a shopping mall in Hong Kong, China December 12, 2019. REUTERS/Stringer Just hours after a high court refused to rule on a bid by the government to quash the protest movement, Chief Executive Carrie Lam said she was prepared to talk to people who were "willing to listen". The court said it would rule on Wednesday on whether to extend the deadline set for protesters to leave the university campuses they have occupied since mid-November. "We're not aware of any deal for (the) protesters," the government's spokesman, Jerome Wainwright, told a media briefing. "What we have in mind is that the government will listen to views from different sectors," he said. Wainwright said the government was willing to listen to views and "continue to engage" with them, but there would be no compromise on the core issues being discussed, including that the Chinese-ruled city was a "special administrative region". "We will continue to look at ways to improve the situation," Wainwright said, adding the government's view was that there was a need to "cease the violence and restore order". The comments came after the court on Monday refused to rule on a bid by the government to quash the
