SyncThru Web Admin Service For ML-2851ND Free Download [Mac/Win] Latest

Using ML-2851ND SyncThru Web Admin Service, users can monitor, control, and manage the workstations, servers, and network devices. The ML-2851ND SyncThru Web Admin Service provides centralized management of all network devices, including Windows and Linux workstations, servers, and mobile devices. It automatically discovers network devices with SNMP and reports status, inventory, and firmware details. It provides integrated monitoring of system status, disk space, virus infections, and mail queue status. Users can schedule the workstation to power on at a specified time. The Web Admin Service can also report inventory information of each device, including its firmware, operating system, and service pack. Users can remotely access and manage all the network devices. It can also remotely reset locked devices to prevent unauthorized access to information. It supports network administrators to remotely set-up wireless hotspots and firewall rules.
