This image was created using Photoshop. The photo was cropped and scaled using the Unmask filter, shown below. Unmask is a type of "smart" background-removal filter, and should be used with caution. This is because it will remove background and foreground areas with the same color, resulting in an image that is visually more attractive than if it were left intact, but is also not as accurate as other filters. If you have specialized photograph editing needs, Unmask may not be the best option for you. Here are a few guidelines when using Unmask: Do not mask the background of your photos. Unmask should only be applied to very simple photographs and portraits. Do not mask the foreground or image areas of your photographs. Unmask is best for very simple or easy-to-understand backgrounds. For example, if you are retouching a photo and your skin is your only background, then Unmask is a good option. Other Photoshop Filters The Filter menu contains several useful filters. Each offers different options for enhancing images, such as color correction, sharpening, and image making. Here are a few of my favorites:

**Exposure Corrector** This filter allows you to quickly change the overall exposure of an image. You can use this to correct images that are too dark, too bright, or that have a range of brightness. **Brightness/Contrast** This filter lets you change the tonal range of an image by adjusting the contrast. Brightness/Contrast is very similar to the Hue/Saturation filter, which controls only the overall saturation. **Curves** This filter changes the tonal range of an image by changing the contrast, but also controls the "saturation" of the image, which it defines as the color intensity. **Luminance** This filter changes the brightness level of a dark to a bright image. **Hue/Saturation** This filter changes the saturation of an image in various ways. Saturation controls the "color" of the image, or how much the color intensity changes. It can increase color intensity or decrease it by changing the saturation. Hue controls the color's overall hue. If the saturation is too low, the image can appear overly desaturated. If the saturation is too high,

Now it's time to put Photoshop Elements to the test! In this guide, we'll go through everything you need to know about editing and manipulating images in Photoshop Elements: from perfecting basic edits, to creating new works of art or memes. If you're new to photo editing in Photoshop, we recommend watching our beginners guide to editing, below. We'll be discussing how to work with images in the program using Elements' tools, including: Photoshop Elements has two primary workflows: Elements and Photoshop. You can switch between the two by choosing your preferred working style from the menu bar. However, this won't affect how your files are organized in the program, so be aware that your files will be unorganized by default (you can undo this by choosing the Organize tool from the Tools menu). The left column of the interface lists the various tools and keyboard shortcuts. Photoshop Elements 2017: How to Edit Images Your Editing Station The program is built around the idea that you can edit and create various workflows as efficiently as possible. You can choose to edit images in either the Photoshop or the Elements environment. Elements is primarily focused on editing in-camera JPEG images. That doesn't mean you cannot edit RAW images, but Elements offers limited support for working with RAW images. When opening a RAW image for editing, Photoshop Elements automatically opens the image in its Photoshop environment. You can work on it just like you would a normal photo in Photoshop. You can open any RAW image in Photoshop Elements using the Open Image in Photoshop Elements option from the File menu. Photoshop Elements 2017: How to Edit Images Using the Split Image Option You can also split the image into a separate layer, work on it in Elements, then switch back and forth by using the Divide Layer option, which is also in the File menu. This allows you to work on multiple images at the same time. It is possible to use this option on JPEG photos, but it is only possible on RAW images because of their extra layers. (There is no way to split a JPEG photo into separate layers.) Photoshop Elements 2017: How to Edit Images Basic Image Editing Since Elements is designed to be more compact than Photoshop, it also has a relatively small, minimalist user interface. It consists of two basic elements: the Layers panel and

K9s are trained to identify specific drugs or chemicals by their smell. But would you believe that they are trained to detect marijuana, too? Police dogs are increasingly being called in to sniff out pot for officers, and they find it fast. In fact, the technique is being used to identify whether or not the presence of marijuana is traceable all the way back to an individual. In the video below, a drug-sniffing dog checks out a suspect and detects not only marijuana, but traces of cocaine and ecstasy as well. "Some of our officers come from other agencies, and they'll train their dog to respond when they bring them to the academy," said Atlanta Police Sgt. Brett Graves. "When officers come in, they'll be able to take the dog off leash, and they'll be able to identify marijuana. I believe there are a lot of cases that are just way beyond the scope of what we're going to be able to do." While the technique might seem to threaten the very purpose of the new standards, the real aim is that marijuana use by children or the elderly might actually be reduced. Should that be the case, then the unintended consequence might actually be a positive outcome. However, anyone concerned about keeping any of the following stills should contact their local police department before using any of the substances mentioned below: Hash and hashish; Marijuana; Cocaine; Ecstasy; Papaver somniferum; Euphorbia macphylla; Peyote (mescaline salts); Psilocybin/ psilocin (from Psilocybe species). Maybe the next Supervising Superdog should be trained to sniff out this stuff, too!

Winning Potential is a blog dedicated to video games. My approach to blogs is simple, provide helpful and informative information for all gamers, old and new. I will play a variety of genres as often as possible such as single player, online multiplayer, online multiplayer co-op and MMO, action adventure, puzzle, RPG, and more. Tuesday, January 8, 2013 Did you know that popular genres such as the RPG's and Action Adventure titles aren't actually very good at what they do? By that I mean most of these popular genres these days and games in general aren't very original

## What's New In Adobe Photoshop Cs 8.0 Free Download For Windows 10 64 Bit?

As pharmaceutical companies, hospitals and clinics continue to struggle with shortages of medical supplies, including syringes, fillers and medical tools, the Australian Paralympic Federation has placed an order with a German firm that will sell a new home infusion pump. The pump, made by Medtronic, has been used in places like New Zealand and the United Kingdom to deliver chemotherapy and store information about treatment regimens. It allows patients to remove patches and connect the pump to deliver their medication directly through the skin or, in the case of stored data, using the IP connections in the pump. The Australian Paralympic Federation says the \$25,000 unit will allow Australian wheelchair athletes to train and compete effectively. The order, which is part of a \$7 million contract with Medtronic, represents an agreement the company entered in 2015. The contract is worth \$7 million, but is split equally between hardware and training software. The federal government spent close to \$30 million funding one of the world's most sophisticated drug delivery machines. It is called NexDip (Neosan's Needle-free Drug Infusion System) and was installed at the National Health and Medical Research Council's (NHMRC) National Facility at Concord Hospital in 2015. After two years of living with the machine in a water-filled chamber, NHMRC says the machine was not connected to any hospital system and its use was limited to two specific medical conditions. Peggy Young, a research leader with the NHMRC, says the machine, which is equipped with an IP connection, means people with a range of illnesses can be treated for their conditions. "It is essentially a pump and software," she says. "It delivers medication in the form of a liquid or powder, and it can manage the medicine dispensing, measurement and delivery." A spokeswoman for the Department of Health says the pump is far superior to the current methods of delivering drugs such as some prescription meds which can be given as drops, as they often require frequent administration. The spokeswoman says it is used by doctors in Australia as the only way to avoid needles and also to treat people with conditions including stroke, heart failure, diabetes, cancer and asthma. "The department is in the process of evaluating the equipment we will have used at the Paralympic Games in Rio de Janeiro next year," she says. "
