■ ABOUT DRAGON BALL®: [Documentation] [Links] ■ ABOUT FUNIMATION INC. ABOUT ZUNTATA CORPORATION ----- ©SQUARE ENIX CO., LTD.Measurement of new myocardial infarction by the adenosine stress echocardiography. To investigate the clinical significance of the adenosine stress echocardiography, we compared its results with those of coronary angiography and analyzed the clinical characteristics of patients in whom new myocardial infarction (MI) was definitely diagnosed. There were 22 patients (13 men and 9 women) who had new MIs diagnosed. Their ages ranged from 51 to 81 years (mean, 67.5 years). In 17 cases, coronary angiography was performed to confirm that the new MI had not been mistaken as a wall motion abnormality, but in 5 cases, it was impossible to perform coronary angiography. The delayed enhancement portion of the left ventricular (LV) wall was examined using the adenosine stress echocardiography. In all cases, the sensitivity of the delayed enhancement portion was significantly higher (100% vs. 63%) than that of global LV hypokinesis (p = 0.01). There were no differences between wall motion abnormalities and new MIs in a coronary angiogram. The clinical information was as follows: onset of MI, 11 cases; exercise-induced, 5; and rest-induced, 6. None of the patients had chest pain or had previously been diagnosed with ischemic heart disease (IHD) except for one patient, whose diagnosis of IHD was confirmed by a myocardial scintigraphy study (99mTc-HSA) before the detection of MI by the adenosine stress echocardiography. The delayed enhancement portion of the left ventricle was visible in 14 cases, and thus, the MI was not excluded in any cases. However, a case with multiple and small MIs in the left anterior descending artery was excluded. New MIs may not always be accurately diagnosed

This is the main thing I'm trying to solve since this whole day. Having a 'bug' in a game's installation is the most distressful thing in the world. So it's quite a weird and upsetting problem that I ran into this morning. This one is for 'piix' if you already know him. I've been using SCMediaBase through xda for the past years and I have no problems with that other than not being able to install, let alone install without launcher saying I've unpacked it and unpacked a couple of times. What the problem is: And what it does is to destroy the whole game. So naturally I've reinstalled it couple of times, checked if I really didn't install it, deleted SCMediaBase, reinstalled the same game, etc. Now the launcher isn't unpack its and normally I would've gave up. But as I've said the SCMediaBase has been working fine ever since I've used it, so obviously there is a chance that something is still there. I've cleaned all the eepc's directories, reinstalled SCSetup, etc. didn't work. Cleaned up the 'android_sdk' directory, etc. Didn't work. So I thought of saving the jdate base from my box in case, and check if it works, it did. Surprise surprise, what it did is to completely uninstall the game, great. Then I realised I have to debug the app, so I've copied the jdate base and reactivate it. And the game installed fine, as it would get if you install it via mobile browser, and that 'caused' a bug, and after about 30 seconds of creation the game freezes, and that's the end of your day if you don't have a backup for your game. Which I have. I posted it on the forum, not sure of
