RUNE CANYON By Dark Infinite RUNE CANYON was a product that got not so much my attention from a weekly web comic, but from a weekly video on Youtube. Rune Canyon is an "Eastern RPG" developed by Yenx Games and available for free on the Play Store. In the game you are presented with a ploughman wandering his life with his two cow; two chickens and his wife. The game deals with the daily life that the ploughman and his family live in a fantasy world, where the player can either choose to play as the ploughman or his wife. The game is divided in different locations with shops, people and monsters, that you can explore with your idle character. There are different jobs in the world (thief, blacksmith, cook, farmer, burglar, healer, etc.) that can be taken, character develop as the ploughman goes deeper in the fantasy world. There is a level progression system, but not much is needed to get to the higher levels. The player's character development is done in three different areas (strength, magic and charisma); every level gained pushes the ploughman in one or two of the three areas. If you like roleplaying games and it's time to get a little bit crazy, I suggest you to try this wonderful game. Rune Canyon is a game that doesn't require much, but that will help you to explore a great fantasy world and enjoy with an incredible soundtrack and game mechanics. **CROSSED** □ **KIWI IMA** By Ziraela Crossed is an action role-playing game that is being developed on the Unity game engine, by the great company Playism. The game was made by Yosuke Matsuda, the creator of the popular anime series Xenoblade Chronicles, who is also the creative director at the company. The game has a unique setting, with it's own mixed history in a post-apocalyptic world which has somehow been left behind by a specific Great War. Now, it's populated by the remnants of a population that survives in a harsh landscape, suffering harsh weathers and scarce resources. It's up to players to explore this landscape and travel together as friends and bff6bb2d33

Development of Glycopeptides having a Novel Sugar Chain Transporter-Specific Inhibitory Activity. Peptidomimetic glycomimetic compounds inhibit the carbohydrate translocation activity of the host-guest sugar transporter sugar transporter ST. This phenomenon has enabled the construction of a highly sensitive bioassay for the diagnosis of glyco-related disorders, including cancer. Here, we report that glycomimetic compounds are usually specific for ST. However, a few compounds exhibit a broader inhibitory activity, possibly due to nonspecific binding to this transporter. To minimize this nonspecific binding, we introduced carbohydrates with a unique glycosylation pattern into the peptide backbone. The resulting glycomimetic compounds exhibited more potent, specific, and selective inhibition of ST than the corresponding peptidomimetic compounds. The unique glycosylation of the polypeptide backbone can be considered as one of the major factors leading to increased specificity and selectivity for ST. This work describes the development of a novel class of nonpeptidic, orally active glycomimetic compounds with antineoplastic activity. Among the techniques for transmitting/receiving a large amount of data at high speed, an optical communication technique using a wavelength band of 1.55  $\mu\text{m}$  and having a high-speed and large-capacity transmission capacity, and a coherent optical communication technique which can offer high-speed and large-capacity transmission are known. As a technology which increases the power of a light source used for an optical transmission, a technology for obtaining a super-luminescence by using a Raman scattering phenomenon in which a pumping light source is stimulated (for example, see patent literature 1)./\* This file is part of Mitsuba, a physically based rendering system. **Screening of rubber latex as a bioavailable source of thiacalix[4]arenes. The dicarboxylic component of the two thiacalix[4]arenes isolated from a rubber latex (ca. 0.1 mg l(-1)) was titrated with guanidinium chloride (GdnHCl) and monitored by UV spectroscopy. A noticeable shift to higher wavelengths of the absorption maximum when tested as a GdnHCl-ligand occurred (from 530 to 570 nm). This observation indicated an increased rigidity of the macrocyclic skeleton that suggests an interaction with the**
